

Two way e-plane divider v.2

WR75 1/2 (2-way) E-plane power divider is waveguide tee intended for equal dividing of transmitted or received Ku-band signal between 2 antennas or other blocks.

Waveguide WR75 1/2 (2-way) E-plane power divider v.2 is intended for equal dividing of transmitted or received Ku-band signal between 2 antennas or other blocks. Two way E-plane divider v.2 can be used in combination with [waveguide filters](#), circulators, [isolators](#) or [flexible waveguides](#) – depends on exact application. In our projects the two way E-plane divider v.2 is typically proposed in the kit with [OLSA-KUH2 V1](#).
